Franklin Gomez Pacoricona

MOBILE DEVELOPER — REACT NATIVE & TYPESCRIPT

Remote · Peru fgp555@gmail.com +51 918221790
linkedin.com/in/franklingp github.com/fgp555 frankgp.com/portfolio/

PROFESSIONAL SUMMARY

Mobile Developer specializing in React Native and TypeScript, with experience delivering Android and iOS applications published on Google Play and the App Store. Built Mix&Match and the Transpaservic mobile app, integrating OAuth authentication, push notifications, and REST APIs. Mix&Match reached over 10,000 users in its first two months. My second strength is DevOps: release automation with App Publisher (Go, Gradle, and GitHub Actions) and AWS infrastructure with Terraform and Docker. I complement this profile with backend development using Node.js, NestJS, and Express, and professional web development experience since 2020.

TECHNICAL ARCHITECTURE & OWNERSHIP

- Built mobile applications with React Native and TypeScript, using React Navigation, Redux Toolkit, Zustand, and Context API according to the use case.
- Integrated Google/Apple OAuth, push notifications, and secure token storage with expo-secure-store.
- Built and published applications with EAS Build and EAS Update; developed App Publisher to automate Android releases with Go, Gradle, and GitHub Actions.
- Implemented AWS infrastructure with Terraform, Docker, Nginx, and Cloudflare Tunnel, with separate dev/prod environments.
- Designed REST APIs with Node.js/NestJS/Express, JWT authentication, and PostgreSQL/MySQL databases.

WORK EXPERIENCE

Personal Mobile & DevOps Project — App Publisher

NOV 2026

- Built a Go CLI with an interactive menu and Android and React Native project detection to run build and publishing tasks through Gradle.
- Integrated the Google Play Developer API to inspect versions and upload Android App Bundles (AAB) to the configured track, using service account authentication.
- Automated versionCode increments before building and publishing, supporting both Groovy and Kotlin DSL Gradle files.
- Generated GitHub Actions workflows for Kotlin and Expo/React Native projects, including builds, release signing, and automatic publishing from the deploy branch.
- Implemented an Expo config plugin to configure Android signing during Prebuild, using environment variables and local configuration for credentials.

DevOps Freelance Project — Briela Sin Fronteras (Peru) · Freelancer

AUG 2026

- Designed infrastructure as code (IaC) with Terraform for a third-party Django + Wagtail site, with a reusable module shared across two environments (dev and prod) with independent state.
- Provisioned and managed AWS resources (EC2, RDS, S3, IAM, Systems Manager) via Terraform.
- Configured deployment of a containerized application with Docker and Nginx as a reverse proxy on EC2 instances.
- Implemented secure service exposure via Cloudflare Tunnel, eliminating the need for open inbound ports (HTTP/HTTPS).
- Developed a Bash deployment automation script covering git pull, build, migrations, static file collection, and healthcheck on every update.
- Configured automated database backups to S3 per environment.
- The project remains in production, with light ongoing support and maintenance.

Personal DevOps Project — Web Uptime Monitor

AUG 2026

- Developed a serverless AWS microservice (Lambda) that checks multiple websites' availability in parallel, with timeout handling and Cloudflare-block detection to avoid false positives.
- Scheduled automatic execution via EventBridge (scheduled rule) and exposed an API Gateway endpoint for manual invocation.
- Persisted each site's state (up/down, since when) in DynamoDB, to detect status changes between checks.
- Sent automated email alerts on outages and recoveries, including calculated downtime.
- Defined the entire infrastructure as code with Terraform (Lambda, API Gateway, EventBridge, DynamoDB, IAM).
- Monitored and debugged execution via CloudWatch Logs.
- Built the project using Claude Code as an agentic AI tool in the daily workflow (implementation, debugging, and infrastructure as code).

Full Stack & Mobile Developer — Mix&Match Outfit Planner (Argentina) · Freelancer

JUL — DEC 2025

- Led end-to-end development of a cross-platform mobile app (Android & iOS) and web platform with React Native and ReactJS + TypeScript.
- Designed and built scalable REST APIs with Express.js and MySQL, structured under modular principles and layered separation.
- Implemented secure authentication via OAuth (Google and Apple Sign-In) and JWT session management, meeting App Store and Play Store publication requirements.
- Implemented unit and integration tests (Jest + Supertest) for authentication flows and critical middlewares.
- Developed a Python microservice for automatic image background processing and removal, deployed on the same VPS, streamlining the content upload flow.
- Integrated AWS S3 storage with image compression and optimization to reduce load times.
- Configured a production environment on a Linux VPS with domain, SSL, and continuous deployment.
- Implemented push notifications in the mobile app to improve user engagement and retention.
- Built an admin dashboard on the frontend for user and content management, using TanStack Query for efficient async data handling and caching.
- Managed global application state combining Redux Toolkit, Zustand, and Context API depending on the use case.
- Stored session tokens with expo-secure-store (Keychain on iOS, Keystore on Android) instead of plain storage.
- Built and published the app with EAS Build and EAS Update (Expo), including iOS builds run on a rented Scaleway macOS instance since I didn't have my own Mac hardware.
- Added a tagging feature for garments, improving organization and search within the virtual closet.
- Implemented a cleanup routine to automatically remove users inactive for more than 90 days, optimizing the database.
- Launched into production, reaching +10,000 users within the first 2 months, and in continuous maintenance and evolution since then.

Full Stack, Mobile & DevOps Developer — Transpaservic (Colombia) · Freelancer

JAN — APR 2025

- Designed and implemented a web and mobile transport order-management system with ReactJS, React Native, NestJS, and MySQL, where the central office issues orders and transport companies approve them from the app.
- Implemented WebSockets for real-time updates.
- Integrated push notifications into the mobile app.
- Automated transactional notifications via WhatsApp API integration.
- Managed mobile app state with Redux Toolkit, Zustand, and Context API depending on the case, and used EAS Build/EAS Update (Expo) for build compilation and distribution.
- Published on the Google Play Store and deployed the web app to production.
- Designed infrastructure as code (IaC) with Terraform, structuring reusable modules consumed by multiple environments (dev/prod).
- Provisioned and managed AWS resources (EC2, RDS, S3, IAM, Security Groups, Systems Manager) via Terraform.
- Configured deployment of a containerized application with Docker and Nginx as a reverse proxy on EC2 instances.
- Implemented secure service exposure via Cloudflare Tunnel, eliminating the need for open inbound ports (HTTP/HTTPS).
- Managed sensitive variables and credentials (tfvars, secrets) following security best practices, avoiding exposure in version control.
- Automated the deployment process with Bash scripts (git pull, .env generation, container rebuild) to update the app without recreating the base infrastructure.
- The system remains in production, in continuous maintenance and improvement since then.

Full Stack Developer — Medical Appointment System (Argentina) · Freelancer

OCT — NOV 2024

- Developed an appointment scheduling system for clinics, with a NestJS, PostgreSQL, and TypeORM backend.
- Designed REST APIs and secure JWT authentication.
- Deployed on AWS EC2 and published the frontend on AWS Amplify.

Full Stack Developer — BPVentures (Henry Projects, Argentina) · Freelancer

AUG — SEP 2024

- Full stack development with NestJS and ReactJS.
- Implemented WebSockets for real-time notifications.
- Documented the API with OpenAPI/Swagger (NestJS Swagger module) and set up a CI pipeline (GitHub Actions) that automatically syncs the spec to SwaggerHub on every push.
- Collaborated in a 6-person team under Scrum methodology.

Full Stack Developer — Mariaknoll Store (Argentina) · Freelancer

MAY — JUN 2024

- Backend development with Node.js and MongoDB.
- Implemented shopping cart and order tracking.
- Designed frontend with HTML, CSS, and JavaScript.

WordPress Developer — Freelancer / Remote (Peru)

2020 — 2023

- Developed and customized WordPress sites for international clients.
- Managed hosting, domains, SSL, and security configurations in cPanel.
- Performance optimization and technical SEO.

EDUCATION

React Native — DevTalles Academy

2025

- Developed cross-platform mobile applications with React Native.
- REST API integration, state management, and navigation.
- Performance optimization and best practices for mobile production.

Full Stack Web Developer — Henry Bootcamp (Argentina · Remote)

2024

- Developed web applications with ReactJS, NextJS, Node.js, and NestJS.
- Designed RESTful APIs and scalable backend architectures.
- Worked with SQL (PostgreSQL, MySQL) and NoSQL (MongoDB) databases.
- Agile methodologies (Scrum), Git, and Pair Programming.

WordPress Web Development — Independent study

2020 — 2023

- Developed and customized themes with HTML, CSS, and PHP.
- Performance optimization and technical SEO.
- Implemented security and maintenance practices in production environments.

Computer Science & IT Technician — Instituto Tecnológico Unitek de IDAT (Peru)

2008 — 2010

- Technical training in computer science and IT fundamentals.

TECHNICAL SKILLS

MOBILE

React Native · Expo · EAS Build · EAS Update · React Navigation · Redux Toolkit · Zustand · Context API · Google Play Store · Apple App Store · Push Notifications · expo-secure-store

CLOUD & DEVOPS

Terraform · AWS EC2/RDS/S3/IAM · AWS Lambda · API Gateway · EventBridge · CloudWatch · Docker · Nginx · Cloudflare Tunnel · GitHub Actions

BACKEND

Node.js · NestJS · Express.js · WebSockets · OpenAPI/Swagger · Modular architecture

FRONTEND

ReactJS · NextJS · TanStack Query · SPA

LANGUAGES

Go · TypeScript · JavaScript · HTML5 · CSS3

DATABASES

PostgreSQL · MySQL · MongoDB · DynamoDB · TypeORM · Mongoose

AUTH & SECURITY

JWT · OAuth Google · OAuth Apple

TESTING

Jest · Supertest

AI & AI-ASSISTED DEVELOPMENT

Claude Code
